

Amaan Visitor Management System

Secure Communities. Smarter Visitor Management.
Seamless Resident Experience.

A comprehensive web & mobile platform that digitizes visitor management, security operations, and community administration for residential societies, gated communities, and smart townships

The Problem

Traditional visitor management relies on **paper registers**, **manual verification**, and fragmented communication — creating security gaps, operational delays, and poor resident experiences

No Visibility

Manual registers offer zero real-time tracking of who enters or exits your premises.

Security Gaps

Unauthorized visitors can slip through without resident approval or digital verification.

Operational Inefficiency

Paper-based processes slow down entry, frustrate residents, and create audit challenges.

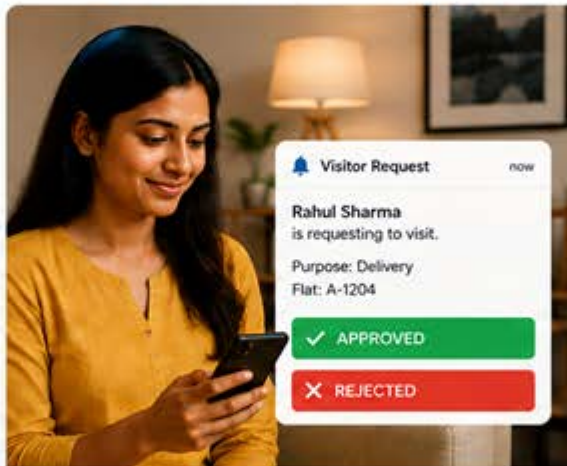

The Solution

Amaan Visitor Management System digitizes the entire visitor journey — from QR check-in to resident approval and verified entry — ensuring security, real-time tracking, and a seamless experience for everyone.

1 Visitor Scans QR Code

Visitors scan the QR code at the entrance to initiate their visit. Instant digital check-in for a seamless experience.

2 Resident Approves / Rejects

Residents receive a real-time notification and can Approve or Reject the visit. Complete control and better security from anywhere.

3 Verification & Entry

Reception verifies the approved visit and allows smooth entry. Secure, efficient, and hassle-free visitor management.

What is Amaan VMS?

Amaan is a unified web and mobile platform that replaces manual visitor registers with intelligent digital workflows — giving security teams, administrators, and residents complete control over every entry and exit.

Security First

Approval-based entry with photo capture and audit logs.

Resident-Centric

Instant notifications and one-tap approval from anywhere.

Multi-Building

Centralized administration across sectors, buildings, and flats.

Full Visibility

Real-time dashboards and analytics for informed decision-making.

How Amaan VMS Works

QR Scan → Fill Details → Notification (Approve/Reject) → Check-in Verification → Check-out while Exit
